

# THE GLEICHEN CALL

VOLUME XXXII NO. 44

GLEICHEN, ALBERTA, WEDNESDAY JANUARY 17, 1940

SUBSCRIPTION \$2.00 PER YEAR

## ITEMS OF INTEREST OF THE TOWN AND DISTRICT

For the time being there will be no picture shows on Saturday nights. The usual Saturday afternoon matinee will continue starting at 2 o'clock.

The coldest weather of the winter struck the district over the weekend. Temperatures have dropped to as much as 13 below.

The town's financial statement will show a wonderful improvement this year. In fact it will be the best statement issued for many years.

The Red Cross Society are getting ready to stage a big dance on Friday, February 10th. Committee meetings have been held and judging from reports this dance will be one of the big events of the season.

Bob Brown, with the exception of Doug Young, is the last of the original Gleichen to hang up his skates and retire to the sidelines. Doug is the only one we know of who left class ice hockey and is now with the Montreal Canadiens. Bob stated last winter hockey was hard work and that age was slowing him up. It was about 1925 he started playing and was the fastest and trickiest player Gleichen ever had. Of all the teams that played on Gleichen ice no one else ever produced a player that could skate faster than he. In his prime Bob was a tower of strength to the Gleichen and in the early years when Gleichen had a six man team because there were no subs, he could go at top speed the full 60 minutes whether the ice was slow or fast. Alfans are sorry to see him retire.

The Red Cross War Work Committee still have plenty of materials a hand for sewing and knitting. Dressed clothing will be gladly received. Appeals for warm scarves and socks are continually being made. Divisional headquarters. Clothing that can be made up in to wearing apparel for children is required. It is hoped the ladies of Gleichen will find time to do all they can in the saving and knitting line. Mrs. Daseof would like you to call at her home Saturday afternoon for sewing.

The regular meeting of the Junior U. F. A. was held at the home of Mrs. F. Hall on January 12th, with sixteen members and one visitor present. The roll call was answered by "What I wish this organization would do or wouldn't do." The business of the meeting was then discussed and ways and means of making money were brought into it. Watch the paper and bill boards because something big is in store for you. A donation of money was sent to a charity organization in Calgary. It was decided to have a directors meeting at the home of Mrs. R. D. Oliver to make out the program from the following year. This meeting will be held on January 22nd. After the meeting a delightful lunch was served by the Yule group and a social evening ensued. The next meeting will be held at the home of Mrs. H. Dankworth on January 26th. Remember all new members are welcome to join.

Many people, even in this town, wonder why locomotives are called "choo." Well, here's one local rail yard chap's answer: "It's because they wear jackets with yokes, pin shields and stays. Not only do they have short pumps and even hoes while they drag train behind them they also attract attention with puffs and mufflers, and sometimes they refuse to work. At such times they need to be switched. They need guiding and require a man to feed them. They all smoke and are much steadier when they are hooked up." So now you know!

Sales of new motor vehicles in Alberta for the first ten months of 1939 were 8.4 per cent of the Canada total—exactly the same per cent as in the previous ten months. Vehicles sold in the province numbered 5,261, with a retail value of \$8,843,518. This is a 9.9 per cent decrease which closely approximates the Canada decrease of 9.6 per cent for the period under review.

## GUNNERS ..... 20 ENGINEERS ..... 21 TOTAL GOALS ..... 22

The above tells the result of the game Saturday when Army Engineers played the Gunners before the largest crowd of the season. There were no penalties. The game was not exceptionally close and no matter how often C. Eichen scored the Engineers never gave up hope and played for all they were worth until the final bell. The Engineers did not have their regular goalies, who were said to be on the sick list, nor did they have their coach, and they admitted after the game they were lost without him. The 20-2 score was the largest number of goals ever made in the local arena.

The following is a list of the Gunners who scored also the number of goals they made:

- T. Brown ..... 1
- "Dachack" McMaster ..... 1
- P. Clifford ..... 2
- Rid. Lester ..... 2
- P. Brown ..... 2
- C. Brown ..... 2
- J. L. Lester ..... 2

The Gunners made four goals in the first to the Engineers one; second Gunners 9, Engineers 1; 3rd Gunners 2, Engineers 0. The crowd gave the Army boys a great hand out on their second score.

Cy McKay handled the ball. Fred Jones won the pot. The hardest working crew were the score boys who were kept busy climbing up and down hanging out the figures on the score board. Some time the score changed so fast they could not keep the pace, finally when there was a ball in the scoring spring hung up the correct number.

Albertan members of the National War Loan Committee to sponsor Canada's first war loan of the new year include: Hon. Solon E. Low; John D. Brownlee; Senator W. A. Buchanan; John Burn; A. M. Campbell, L.A.; Chas. E. Campbell, Edmonton; Major Gen. W. A. Greibach; H. I. Milner, Edmonton; John Horne, Calgary; Warren Prevers, Edmonton; J. H. Woods, Calgary and H. T. Hall, well, Coleman.

## COMING EVENTS

Feb. 16—Local Branch Red Cross Society dance.

## THE RUM ISSUE

BY FRED JONES  
This Column Given to News of the Gleichen Branch of the Canadian Legion.

Stand To!  
We read recently that slightly over two hundred Jews out of over two hundred thousand volunteers have joined the British Army. This may be enemy propaganda but if true it makes us wonder if Jews really object to all the persecution they have been subjected to.

We are also waiting to see if all Poles, Czechs and Austrians living in Canada are going to fight for their homeland. From what action they take we will learn whether European refugees deserve all the sympathy given them in the past.

We got the real dope on the Irish situation the other day. Jack Downie asked Tom Burns why his countrymen were always fighting at home and Tom replied that it was because the Irish had more brains than anyone else. He said, "When the Irish want to fight they don't go all over the world but put on a battle at home where they sleep in their own beds and enjoy good food cooked at home." Not a bad idea that.

The board appointed by the government Uruguay to investigate the charges that the British used gas shells in their battle with the Graf Spee have found that these charges were false. So the Nazis can scuttle that one too.

appointed in Calgary, Edmonton and other points. A few words of explanation would have saved them the trouble and expense of going to the depot and the subsequent disappointment.

Many more men will be needed as the war goes on but any large recruiting campaign in this country does not seem imminent. There are somewhere around a million and a half men in England still unemployed. That Britain has taken troops from Canada and other Dominions has proved a splendid gesture of solidarity as the enemy propaganda machine had been saying that the Commonwealth was not united. The fact that the troops could be safely transported to England will have its moral effect also. The U boats haven't had much luck with convoys.

Tom Brown felt sorry for Strathmore in their hockey game last week. When Strathmore could not break the tie Tommy obligingly shot the puck into his own net and won the game for Strathmore.

If the Finns had been as unprepared for war as Canada when the Russians attacked them they would

be wondering around in (bearskins?) instead of reindeer fur.

The Gleichen Gunners and the Engineers from Calgary Garrison played hockey here Saturday night and the Gunners won by an overwhelming score. We cannot say what was wrong with the Calgary team for they have won a good share of their games against fair teams. However, it turned out alright as far as the writer is concerned as he drew the joker—good for ten snickers.

We have received word from the Finnish Voluntary Service League to the effect that men wishing to join the Finnish army will receive transportation and will come under Finnish army regulations as to rates of pay and allowances. We do not know at this time what the pay is there so we cannot advise married men with dependents, but any single men wishing to get in touch with the League can simply here if they wish and we will write for them and get particulars.

No room this week for news of Lions' Foreign Legion. Lights out!

## THE WORLD OF WHEAT

BY M. G. L. STRANGE  
Director, Research Department  
Saskia Grain Company, Limited

Dr. L. H. Newman, the Dominion cerealist, recently stated that 2,800 farmers in Manitoba and Saskatchewan have now reported to the Dominion Experimental Farm on their practical experience with the new rust-resistant wheat variety, "Regent" (which is a product of the Dominion Rust Research Laboratory) grown in 1939 and in comparison with other varieties sown alongside.

"The farmers' observations in brief are as follows:

Yield: Regent gave an excellent account of itself.

Gashoppers: Regent and Thatcher suffered less damage from grasshoppers than Renown, Reward or Marquis.

Stealing: It is a vigorous stealer and a good fighter against weeds. Straw strength: Very strong at the base of the plant, but quite weak as flexible as Thatcher towards the top. Should be a good combine variety.

Appearance of kernel: Color and

plumpness were better than Thatcher but not quite equal to Renown, but this was considered a bad season for Regent.

Threshing: Regent threshed quite easily.

Resistance to spring frosts: A number of growers reported that Thatcher stood the early June frosts better than other varieties, but Regent also was favorably commented upon.

Future outlook: "Judged by these reports," says Dr. Newman, "Regent will be grown very extensively in 1940 and would appear to be a variety that has a very definite future."

Final session of the present legislature will open February 15, it was announced by Premier Abernethy. An order in council has been prepared calling the house together. Proclamation will follow. This will be the ninth session, there having been four regular and four special sessions since 1935. Premier Abernethy said the legislative program is expected to be light, that the budget will be ready for introduction soon after opening, that the session may be brief. Unless a special session should be called in the interim, a general election will precede the next session.

## DOMINION OF CANADA FIRST WAR LOAN \$200,000,000

The Bank of Canada is authorized by the Minister of Finance to receive subscriptions for a loan to be issued for cash in the following terms:

### 3 1/4 Per Cent Bonds

To be Redeemed by Annual Drawings by Lot as follows:

20% of the Loan on February 1, 1948 at 100.00
20% " " February 1, 1949 at 100.00
20% " " February 1, 1950 at 100.00
20% " " February 1, 1951 at 100.50
20% " " February 1, 1952 at 101.00

Issue Price: 100% and accrued interest.

The proceeds will be used by the Government to finance expenditures for war purposes.

Payment is to be made in full against delivery of interim certificates on or after February 1, 1940.

Principal and interest will be payable in lawful money of Canada. Interest will be payable without charge semi-annually at any branch in Canada of any chartered bank. The Bonds will be dated February 1, 1940.

Denomination of Bearer Bonds: \$50, \$100, \$500, \$1,000

The Minister of Finance may, at his discretion, authorize the Bank of Canada to accept applications to convert Dominion of Canada 3% Bonds maturing March 1, 1940, into an equal par value of additional bonds of the above issue. The 3% Bonds accepted for conversion will be valued at 100.17% and accrued interest to date of delivery.

Cash subscriptions and conversion applications may be made to the Bank of Canada, Ottawa, through any branch in Canada of any chartered bank or through any approved investment dealer or stock broker from whom copies of the official prospectus containing complete details of the issue may be obtained.

The Minister of Finance reserves the right to allot cash subscriptions in full or in part.

Subscription lists will open at 9 a.m., E.S.T., on January 15, 1940, and will remain open thereafter for not longer than two weeks, but may be closed at any time at the discretion of the Minister of Finance, with or without notice.

OTTAWA, January 12, 1940

GROWN IN SUNNY SOUTHERN ONTARIO

## The Nation's Backbone

The youth of to-day will be the backbone of the nation-to-morrow. This thought inspires the question: "What kind of a backbone is being built up now, in order that the nation of to-morrow may be virile, strong and characterful?" Is the foundation for a Canada that will be able to take its proper place in the sun being laid?

These are important questions, for upon the answer to them depends the future destiny of this country.

In the light of the present day state of a substantial percentage of our youth, many of whom still find themselves without gainful employment as they ripen into manhood and should take upon themselves the full duties of citizenship, the future is obscure. To banish this obscurity and translate it into certainty is essential that more thought be given to the problem of youth and that definite action be taken to prevent disaster.

Canada is now engaged in warfare to preserve our heritage of democracy. While this struggle is going on, we cannot so well build that the democratic structure will be strengthened and something worth preserving.

As the outset of the war, it was the popular impression that war would solve this problem, at least as long as the conflict lasted. It was the prevailing impression that a good many of Canada's unemployed youth would be absorbed in the fighting forces and that the remainder would find employment in the manufacturing industries engaged in the construction of armaments, and marine and aerial crafts and auxiliary industries, but there is some reason to doubt that this will be the case.

Unquestionably the fighting forces and industry will provide activity for some of the idle youth of the country but there is now reason to believe that it will not take care of them all for the duration of the war and there is still left the problem of providing for them after peace is signed.

## Requirement Limited

The character of the war up to the present leaves the impression that the number of fighting forces from Canada will be limited, and that under existing regulations only those who are physically perfect are being taken. As for the manufacturing industries directly related to war effort, only highly skilled workers are being taken at present, leaving no provision, other than the ordinary commercial outlets for those who cannot measure up to rigid physical examination or who are not highly trained.

To take care of these, not only is training for industry essential, but it is necessary that work be found for them. The youth training program is all right as far as it goes, provided the courses are adequate, but when these youths have completed their courses, there must be work for them.

The United States Government is somewhat of an expert in this matter, for the country the American Youth Commission of the American Council on Education, which has been studying this problem, says, in a recently published report:

"There is grave danger in the widespread belief that a war boom will solve all our unemployment problems, including the special problems of unemployed youth. The Commission, therefore, feels it imperative to point out that the war boom jobs will not be open to inexperienced young people."

"While it seems probable that business will be stimulated by war purchases, the most optimistic estimates indicate only two or three million new jobs for the many millions of unemployed workers. The Commission believes that the remaining unemployment will be concentrated heavily in the lower age groups."

The Commission found, based on the 1937 census figures, that one-third of the unemployed workers in the nation are young people, 15 to 24 years of age; that the rate of unemployment is higher among youth between 20 and 24 than in any other age group; the highest of all for young people between 15 and 20 who are out of school and seeking work.

"Under modern conditions," the Commission's report says, "it is clear that young people are increasing in number, and that they are fairly prosperous times. Opportunities for self-employment on the land are restricted by the fact that the number of farm boys who reach the age of 18 each year is more than twice as great as the number of farms that fall vacant. Opportunities for work in family enterprises are reduced by the growing concentration of business and the diminution in the number of successful small businesses. The restrictive rules of trade unions and professional associations have the minimum age and limited the openings for apprentices and beginners with increasing severity during the depression."

## A Federal Duty

In the light of this situation, the Commission's conclusions are interesting. They suggest it is the duty of the federal government to provide public work which "should be planned with special regard to the educational quality" for these young people; that "vocational guidance should be part of the plan" and "should be based on sound studies of the outlook for employment in the various occupations."

Stating that the cost need not be more than \$600 per year for each young worker, the Commission points out that from that amount there will be numerous deductible amounts. "The contributions of these young people to the aid of their families will undoubtedly lessen the need for public assistance. The work on which they are placed should be designed to provide for effective work experience in such a manner that the work done is a true service to the community. Work which meets these standards will certainly add to the wealth of the nation."

The application of some such program as, at least a partial solution of the problem in this country, is certainly worth pondering.

## Pull Of The Moon

The actual pull of the moon on the surface of the earth depends on the varying distance at which the moon is to be found. But the results obtained depend on whether or not the moon is working in co-operation with the sun.

Pleur muscles in the palm of the orang-utan clench the fist so tightly that museum collectors, skinning one of the animals, found it necessary to cut the muscles before they could straighten out the fingers.

**Advice To Country Walkers**  
Walk off the road, or at the extreme outside edge of the road, and at the side facing automobiles, so that you can see them coming.

The U. S. Department of Agriculture has estimated that 16.3 acres of hay can be raked by one man with a one-horse rake in one day.

## Developed Bad Habit

A pelican at Bologna Bay, California, allowed a fisherman to feed it a fish out of his hand. Since then, it has never been known to catch a fish itself. The fishermen on the bay know it, and they have only to wave their hands and it will fly to their half bait to be fed. But it will not fish for itself.

Mrs. Sarah Winchester believed that death would never take her as long as her home remained undisturbed, so she kept adding rooms.

On her death, in 1922, her Santa Clara, Calif., home contained 160 rooms.

Sumatra is the sixth largest island in the world, with 160,000 square miles of area.

Ice cream is placed between fine sheets of gold leaf before it is eaten by Indian rajahs.

## The Shetland Islands

Some Interesting Information About Territory Now Very Much In The News

German air raiders have brought the Shetland (or Zetland) islands into the war news. Public notice is a rare experience for this remote part of Britain.

The Shetland group lies north of Scotland, making up a Scottish county, and is the most northerly British possession in Europe. There are more than 100 islands and islets, but only about one-quarter are inhabited, and in some of them the population consists only of a few lighthouse keepers and shepherds. Altogether the islands have an area of 352,310 acres, and in 1931 had a population of 21,410, having shown a slow but steady decline since 1861. The largest island, Mainland, had 18,268 of its people. Mainland is 84 miles long and 21 miles wide, but the coastline is so broken that no spot in the Shetland is more than three miles from the water, and they are a rugged, desolate, but in a more rugged style.

These islands had the more important of the islands are Yell, Unst, Fetlar, Whalsay, Bressay, Torran, East and West Burra, Papa Rona, Muckle and Fair Isle. The group's coast scenery is magnificent, with great cliffs and deep indentations, but the interior is treeless and barren.

Fishing is the main occupation of the islands, and the fish markets (nowadays they are fishing mostly, no doubt, for German mines and the navy). Women do most of the farm work, and the fish are taken in the islands' distinctive knitted-goods industry. The Shetland people are well known for their native cattle also are diminutive in size, and the native sheep, we read, "possess many of the characteristics of the goat". Fish are abundant, they catch whales in the bays, and there is an immense variety of sea birds. We need not mention the German raiders are interested in the islands' attraction comes from the fact that the islands' native bases not far away, and those deep, narrow bays perhaps are being kept secret, and the islands are being used as a base for the navy.

## Doctors On Postage Stamps

United States Pays Honor To Prominent Medical Men

Two internationally-known doctors, being honored by the U.S. Post Office Department in a famous American series of postage stamps, are Dr. Howard Crosby and Dr. Major Walter Reed of the U.S. Army Medical Corps and Dr. Crawford W. Long.

Dr. Reed is honored because of his discovery that yellow fever is transmitted by the bites of mosquitoes. He was killed in Cuba in 1905, and has been present in the Western Hemisphere for three centuries and in devastating epidemics caused the death of thousands of people.

Dr. Reed and his associates conducted experiments in Cuba and caused the famous epidemic following which yellow fever soon disappeared from North America and has never returned.

Dr. Crawford Long, the general practitioner of medicine memorialized by the post office department of the United States is known for having been the first person to use sulphuric ether as an anesthetic during the performance of a surgical operation. That was in March 30th, 1842, when Dr. Long operated on a man in Jefferson, a small town in Georgia, then twenty miles from a railroad.

## Needless Noises

Every City Should Suffer From The People From Such Annoyance

Automobile horns cause more annoyance to hotel guests than any other noise-maker, according to a survey by the Hotel Association of New York City. Street whistles caused the least. And of the other 18 contributors of noises studied either were connected with motor vehicles or with radios. A bad effect of noise on persons who are ill is indicated by the "quiet zones" with which hospitals are surrounded—and not all who are ill are in hospitals, where they can escape the noise of automobiles and radios. A city in this mechanical age cannot escape all noise, but it can, if it is so disposed, safeguard the public from many unnecessary noises, which murder sleep and rack human nerves.—Brandon Sun.

Disconcerting as it may be to fishermen who glory in their gaily-colored flies, fish distinguish between different colors in the same manner as do certain types of color-blind persons.

## Conditions In India

A Letter From Mr. J. Chinnai Durai

In The London Times  
Comparatively speaking India is infinitely better off than Germany. There is freedom of speech in India, and every Indian can speak out his mind about the British regime and give reasonable expression to his grievance without the fear of being sent to a concentration camp and tortured there for the rest of his life. An Indian judge can sit in judgment over an Englishman, and send him to prison if the law and facts warrant his taking such action. An Indian can become a member of the Prime Minister of a province, with extensive powers to regulate the conduct and movements of English residents in India with the support and co-operation of an elected Indian Parliament. An Indian in England can become a member of Parliament or sit as a judge in His Majesty's Privy Council. Indians are not restricted as to what money they should take out of their country, where they should go, how they should say, how they should act, whom they should marry, or how many children they should have, etc., as is the case in Germany. India has been gradually initiated into the stage of a self-governing nation, and the attainment of complete self-government is only a matter of time. In Germany, however, the people are all slaves and there is only one man who is "free"—much too free.

## SELECTED RECIPES

## DELICIOUS COCONUT SQUARES

1 cup sifted Swans Down Cake Flour  
1 teaspoon Baking Powder  
6 tablespoons butter  
1/2 cup sugar  
1 egg, unbeaten  
1 teaspoon vanilla  
1/2 cup Baker's Premium Shred Coconut  
Sift flour once, measure, add baking powder, and sift together three times. Cream butter thoroughly, add sugar gradually, and cream together until light and fluffy. Add egg and beat well. Add vanilla and coconut, add flour gradually, beating well after each addition. Spread on greased baking sheet, 12x9 inches, and bake in moderate oven (350 degrees F.) 20 minutes, or until done, but in squares remove from pan while slightly warm. Makes about two dozen squares.

## Know About Light Waves

It is said that 1860 Christian Huygens was the first to suggest that light travelled in waves from its source like the circles that spread on the surface of a pond when a stone is tossed into the water.

Automobile headlights usually glow alternately dim and bright because of imperfect connections between battery terminals and cables.

## Apex Wheat

Greatly Increased Preference Shown For Apex And Renown Varieties

Inspectors of the plant products division in Saskatchewan's Department of Agriculture report that growers of registered and certified seed displayed greatly increased preference this year for Apex and Renown wheat.

Seed growers selected Apex, a variety produced at the University of Saskatchewan, as the most adaptable for registered or certified seed production. Officials of the branch inspected 15,353 acres of this variety compared with only 3,920 acres in 1928.

It was also discovered that Renown wheat, another rust-resistant variety, was grown in greater amounts last summer. Field inspections of this variety covered 8,409 acres against 3,814 acres a year ago. Less Thatcher wheat was inspected than any other variety of Western Canada's paramount grain. Only 4,129 acres were surveyed compared with 41,791 acres inspected last year. Seed branch inspectors surveyed 2,429 acres of Regent wheat, a new variety developed by Manitoba agricultural experts.

Applications for inspection of flax covered 2,735 acres against 715 acres inspected last year. Alfalfa inspections were twice as heavy as the year ago. A total of 26,800 acres of alfalfa were examined by department experts in Saskatchewan during the past summer compared with 13,000 a year ago.

Oats, barley and rye inspections remained practically unchanged.

## The Title Of Reverend

Canadian Ministers Not Likely To Follow Michigan's Action

A movement in the United States to abolish the descriptive title of Reverend, in the case of clergy and substitute therefore the plain Minister, may occasion surprise in clerical circles in Canada and it is not likely to be accorded favorable consideration.

The Ministerial Association of Lansing, Mich., recently held a meeting at which it was decided to abolish all titles in the church. In an announcement dealing with the action, the association declared: "We believe that philological abomination which prefixes our names with 'reverend'."

So far as can be learned, there have been no discussions on this subject in Canadian church circles and there seems to be little information as to the reason for the change in the Michigan jurisdiction. In fact, there is good reason to believe that Canadian church supporters would be adverse to such a development in this country, since the use of the term Reverend is regarded as intimating the appropriate dignity of the clergy in a manner that would not be extant if there were no de-differentiation from a lay occupation.

Barbara Canadian Observer.

Customer—"Is this a genuine fox fur neckpiece?"

Saleslady—"Well, no, madam, it isn't, but it's just as good. It's a fox-skin!"

The population of India is estimated at more than 353,000,000.

## Chemical Warfare

Protection Against Chemical Attack Is Difficult To Obtain

The chief of chemical warfare of the United States Army believes nations lacking "great resources for production of war chemicals will not begin toxic gas warfare."

Major-General Walter C. Baker added, however, that address before the western New York section of the American Chemical Society that he "is unopposed is to invite chemical attack."

"Without adequate protective equipment chemical warfare might well be decisive," he said.

For each new chemical warfare offensive development in the Great War, he said, "some reasonably effective means of protection" was devised.

At the same time, General Baker pointed out that protection against chemical attack never attained perfection, citing as reasons effective equipment or inevitable lapses in gas discipline."

## Taking Care Of Aviators

Men Are Carefully Watched To Detect And Prevent Nerve Strain  
With the Royal Air Force in France—A Harley street specialist in uniform stepped into a plane and left for England, where he reported on how Great Britain's pilots and flying crews are standing up to the strain of war.

An consulting neurologist to the Royal Air Force, the specialist had just completed an exhaustive tour of the main airbases to receive reports from units of medical officers on the psychological state of British airmen after eleven weeks of waiting for action.

His report, it is thought, may result in the appointment of a permanent neurological expert to the forces in France and possibly in the establishment of a small rest zone for treatment of minor nerve cases. This does not mean there is anything wrong with Air Force fliers' nerves. On the contrary they have withstood the prolonged period of little activity surprisingly well.

But so far it has been mainly a war of nerves on the Western Front. Fear of the unknown, fear to be clearly on a man's mental makeup as any stress of actual fighting. And the majority of flying crews in France have not yet been engaged in direct action with the enemy.

R. A. F. medical officers find they have to be physicians, not just quietly, unobtrusively, they mingle with officers and men at their work on airbases, in messes and at night. They watch for a man with dark-ringed eyes. He is not sleeping well. Perhaps he is cold—an officer's blank will fit that.

The way a man holds his cigarette, nervous twitching of his eyes, a little nervous gesture, when repeated—all these things may tell their story.

Many medical officers are pilots themselves. They observe men who they just engaged in their first fight, those who may have made a forced landing due to enemy action and those who have had to make parachute jumps.

At the first sign of cracking they approach the commanding officer of the unit and recommend that the man concerned should be sent home.

"Our whole aim is preventive," a senior officer explained. "We watch for the slightest signs of mental disturbance or undue nervousness on the part of any man so that if preventive treatment may prevent him from becoming a pilot."

## A New And Better World

Britain Does Not Intend To Impose A Violent Peace  
"We did not enter this war with any vindictive purpose and therefore we do not intend to impose a vindictive peace," Prime Minister Chamberlain declared in the House of Commons.

"But we must first put an end to the menace under which Europe has lived for so many years," he said. "None of us know how long this war will last, in what direction it will develop, or when it is ended, who will be standing on our side and who against us."

"In those circumstances it would be mischievous if we were to attempt to lay down the law, the conditions in which the new world is to be created. It may be that there will be no vindictive also to be taken into consideration before we can decide how a new and better world is to be laid out."

Two hundred pounds of hay, corn, and roots make a day's meal for an elephant.

Old Dying Process  
Among the oldest of dying processes known is that used in France. Africa, India, leaves charcoal, and water are placed in a 30-foot pit. The cloth to be dyed is then placed in the solution and left from one to six days.

Two hundred pounds of hay, corn, and roots make a day's meal for an elephant.

INTERNATIONAL  
The proposed location would include the extreme southeastern corner of Manitoba and a large block across the border.

## Not Merely Women's Job

Man In Chatham, Ont., Knitting Socks For Red Cross  
George H. Wright, of Chatham, Ont., claims that knitting is not a job merely for women. He has been at the art when he was a boy, and, since his early youth, he has knitted his own over-socks. In indifferent health at the present time, Mr. Wright is finding knitting an interesting diversion. Already he has turned over nine pairs to the war committee of the Red Cross.

"We see stars" when struck on the head, because the optic nerve carries only sensations of vision no matter whether stimulated by light waves or a blow.

The biggest North American bird, the California Condor, is about 5,000 times as large in bulk as the calico hummingbird bird, which is America's smallest.

The birch tree sheds its bark annually.

## Contribution Of Canada

Machine Too Sent To Britain Have Been Appreciated  
Canada is supplementing the flow of ammunition and raw materials to Britain with machine tools for aid in the British arms effort. A. A. Rowan, controller of machine tools, told the Canadian Press. "That is one of the contributions Canada is making and it is much appreciated," Mr. Rowan said.

Canada is sending mainly machine tools for boring gun barrels. The cutting tool, with tungsten carbide powder, an important constituent, responsible for the development of machine tools of high rate of production.

Germany has no tungsten. China is the main source and it is available to Britain through her control of the seas. Mr. Rowan said he believed this circumstance would play a vital part in the war's outcome.

The introduction of tungsten carbide powder created a minor revolution in industry. It is now possible to produce eight times the number of armaments from the same type of machines. It is possible to produce shells in minutes, as against hours in the last war.

The ministry of supply aids factories to obtain the necessary machine tools. To speed up production it has been made compulsory for factories making these tools to eliminate gloomy interiors. Elimination of this process in one factory meant the freeing of 4,800 square feet of floor space for other necessary work.

Commenting on the presence of foreign machines, such as those made in the United States, in factories here, Mr. Rowan said there was no reason to be dependent on the British machine tool industry.

"We had showed that other people had showed, their hand and then we had to move quickly," he said.

British supplies of foreign currency gave the country a big advantage in the purchase of such tools, he said, and his department was obtaining as much as possible of the huge production of the United States.

## Subways In Paris

Are Now The Gayest Spots For Hundreds Of People  
In Paris at war all roads lead to the subway.

Lovers who used to seek the park benches now jam the benches in the "Metro." The subways offer cosy warmth, and his department was obtaining as much as possible of the huge production of the United States.

It was if they were possible, some Parisians would put beds in the subways and sleep there.

Any night in the week hundreds of Parisians can be seen lounging in the long, slightly dimly lit corridors of the "Metro." Bench seats are at a premium. Parisians who once made dates for an evening with their friends at the hospitable sidewalk cafes now met their rendezvous for the subway.

This correspondent saw one language teacher giving a lesson to a pupil in the subway as trains clattered in and out. Streetwalkers heard their dates there, friends met and some people go there because the subway is the easiest way to reach the gayest part of formerly "Gay Paris."

## Winter Months Hardest

Just to show how much more fatal the winter months are to folks with heart ailments, United States deaths from cardiac trouble in June, July and August of 1937, the most recent year for which figures are available, totalled 99,903, against 131,006 for January, February and March of the same year, says the New York Post.

It is not safe to put a cat of someone's on any surface but for one's hand.

The new form of polarized light is a non-glare desk lamp.

## German Family Hold Secret

But Toronto Expert Hopes To Produce Glass For Artificial Eyes

The war is about to give Toronto its strangest industry—making the glass for artificial eyes.

All the glass now used in artificial eyes comes from the little town of Lenzburg, Germany, where one family has kept the secret of making the highly specialized glass for generations. But not a shipment of glass for artificial eyes has reached Canada since the war began; and since the eyes must be replaced every year or so, a considerable amount of glass is used.

Dr. Clifford Taylor of Toronto, the only man in Canada expert at how to make the glass into the proper shape for eyes, has virtually decided to hunt and the technique of making the glass itself if the supply is likely to be shut off for a matter of years.

Since the glass manufactured in Germany is of a special quality which England and France have already tried to duplicate without success, it is believed a considerable amount of research will be necessary before Canada will begin to produce its own artificial eyes.

"Since the war began, the supply of glass has been shut off to all parts of the world," said a member of Bausch and Lomb Optical Co. "A small amount may get through, but to the United States, but we have not heard of any Canada has received none at all."

A former German in New York, he revealed, has a four-year supply of glass on hand for artificial eyes. This is believed to be the only large stock of the material. Several years' supply has been stored away ever since the World War, when there was also difficulty in getting the German glass.

"If there is sufficient demand glass experts here or in the United States will probably find out how to make it," said the Bausch and Lomb spokesman. "But it means costly research. The only man in Canada qualified to make such glass would be Dr. Taylor."

Prices haven't gone up yet—around \$8 for an imported ready-made eye, or \$20 for one made to order on this side of the ocean.

Old Dying Process  
Among the oldest of dying processes known is that used in France. Africa, India, leaves charcoal, and water are placed in a 30-foot pit. The cloth to be dyed is then placed in the solution and left from one to six days.

Two hundred pounds of hay, corn, and roots make a day's meal for an elephant.

## Patriotic Songs

Out These Verses Out And Keep For Future Reference

## GOD SAVE THE KING

God save our gracious King,  
Long live our noble King,  
God save the King;  
Send him victorious,  
Happy and glorious,  
Long to reign over us,  
O God, save the King.

O Lord our God, arise,  
Scatter our enemies,  
Thy power shall make them fall;  
Confound their policy,  
Frustrate their knavish tricks,  
On Thee our hopes we fix,  
O God, save the King.

Thy choicest gifts in store,  
On him be pleased to pour,  
O God, our God, arise,  
May he defend our laws,  
And ever give us cause  
To sing with heart and voice  
God save the King.

Our level Dominions shall  
With peace and happiness  
From shore to shore;  
And let our Empire be  
Like to the stars and thee  
God save the King.

## O CANADA!

O Canada!  
Our Home and Native Land!  
The secret of our life is bound  
In thy soil, our noble blood,  
Thy gifts and thine are ours, and thine,  
O Canada, our Fatherland.

With glowing hearts we see thee rise,  
The true North, strong and free;  
O Canada, O Canada,  
We stand on guard for thee!

Chorus—  
O Canada! glorious and free!  
We stand on guard, we stand on guard,  
We stand on guard for thee!

O Canada, we stand on guard for thee!  
O Canada!  
Where our prairies and maples grow,  
Great prairies spread and lordly

How dear to us thy broad domain,  
From East to Western Sea,  
Thou land of hope for all who toil!  
Thou True North, strong and free!

O Canada, thy children's hearts  
Shall glow with thy love,  
May stalwart sons and gentle  
Daughters, thy children be!

To keep thee steadfast thru the years  
From East to Western Sea,  
Our Fatherland, our Motherland!  
Thou land of hope for all who toil!

Thou True North, strong and free!  
O Canada, thy children's hearts  
Shall glow with thy love,  
May stalwart sons and gentle  
Daughters, thy children be!

To keep thee steadfast thru the years  
From East to Western Sea,  
Our Fatherland, our Motherland!  
Thou land of hope for all who toil!

Thou True North, strong and free!  
O Canada, thy children's hearts  
Shall glow with thy love,  
May stalwart sons and gentle  
Daughters, thy children be!

To keep thee steadfast thru the years  
From East to Western Sea,  
Our Fatherland, our Motherland!  
Thou land of hope for all who toil!

Thou True North, strong and free!  
O Canada, thy children's hearts  
Shall glow with thy love,  
May stalwart sons and gentle  
Daughters, thy children be!

To keep thee steadfast thru the years  
From East to Western Sea,  
Our Fatherland, our Motherland!  
Thou land of hope for all who toil!

Thou True North, strong and free!  
O Canada, thy children's hearts  
Shall glow with thy love,  
May stalwart sons and gentle  
Daughters, thy children be!

To keep thee steadfast thru the years  
From East to Western Sea,  
Our Fatherland, our Motherland!  
Thou land of hope for all who toil!

Thou True North, strong and free!  
O Canada, thy children's hearts  
Shall glow with thy love,  
May stalwart sons and gentle  
Daughters, thy children be!

To keep thee steadfast thru the years  
From East to Western Sea,  
Our Fatherland, our Motherland!  
Thou land of hope for all who toil!

Thou True North, strong and free!  
O Canada, thy children's hearts  
Shall glow with thy love,  
May stalwart sons and gentle  
Daughters, thy children be!

To keep thee steadfast thru the years  
From East to Western Sea,  
Our Fatherland, our Motherland!  
Thou land of hope for all who toil!

Thou True North, strong and free!

## 450 B.C. IN ANCIENT EGYPT

The art of brewing was known and practised for many hundred years before the Christian era. In 450 B.C., we are told that the Egyptians being without vines, made a wine or beer from corn. Pliny and Helianthus informed us that the Egyptians are thought to have derived their taste for "Zythum" (meaning a barley drink) "because it was necessary for human bodies."

### THE CAREFUL DRIVER

Higher speeds not only increase required stopping distances but they increase the severity of accidents. We know that the blow delivered by an object, or as it is scientifically termed, the force of impact, is proportional to the square of the speed. Here is an example: A vehicle travelling at 40 miles an hour is capable

of inflicting four times the damage of one of the same weight travelling at 20 miles an hour. At 60 miles an hour its damage capacity is nine times that at 30 miles an hour. These rates of speed are just as dangerous as falls, for we may compare the speed of vehicles travelling 20, 40 and 60 miles an hour as having the same capacity to inflict damage that they would have if driven off one,

### THE WEEK IN EDMONTON

(By Dan E. Campbell)

Spectacular successes of the Finnish ski scouts against the Soviet invaders bring forcibly to mind the fact that Canada is skilful-agnostic to an extent hitherto undreamed of. That Alberta provides some of the finest skiing locations in North America—and that both Dominion and Provincial ski championships will be staged at Banff and Jasper respectively in a few weeks.

For the events, local officials are making great preparations. Visitors to either mountain resort will receive their fill of thrills, entertainment and fun. The Banff meet, following closely the winter carnival, is expected to attract large numbers of United States visitors. Theatre, dancing, swimming, singings are all arranged. In addition are skating, curling, tobogganing and hockey. Four modern ski lodges within easy distance of Banff will contribute to the enjoyment of visitors. The Dominion championship meet opens February 29, continues to March 3. Railways are co-operating with cent-a-mile trips.

Growth of the credit union movement in Alberta was demonstrated last week when details of increased membership and scope were revealed. The Banff meet, following closely the winter carnival, is expected to attract large numbers of United States visitors. Theatre, dancing, swimming, singings are all arranged. In addition are skating, curling, tobogganing and hockey. Four modern ski lodges within easy distance of Banff will contribute to the enjoyment of visitors. The Dominion championship meet opens February 29, continues to March 3. Railways are co-operating with cent-a-mile trips.

loosed by Hon. E. G. Manning. During November, Alberta's 23 active credit unions recruited 160 new members. Since inception, a total of \$84,000 in personal loans has been made by the unions, thus putting to work their total assets of \$44,440. Ten new unions are forming and a good number of groups have commenced the necessary studies which must precede granting of a charter. It was learned that one Edmonton vocational group saved members \$4,000 by granting \$15,000 loans to members, who utilized the money to consolidate and clear off debts, make cash purchases and obviate carrying charges. At the year's end a dividend of 5 per cent was declared. This union has loaned \$29,000 all told.

Active co-operatives are also on the increase in Alberta. There are now 191 operating, as compared with 100 at the end of 1938. These include creameries, cheese factories, live stock stores and sundry co-ops. "The greatest need of the Alberta co-operative movement lies in the field of administrative assistance to existing concerns and development of the fundamental principle of self-help," said Deputy Trade Minister, W. D. King, making the announcement. "Through correspondence, circulars, interviews and the spreading of suitable literature, Alberta is endeavoring to fill the need."

License plates to the number of 1,800 a day were received in the Provincial Secretary's Department up to Wednesday last, dead line for return of plates to qualify for the 20 per cent refund paid to those who do not run cars during the winter. The license year expires March 31.

Edmonton will save \$18,000 in social service tax costs this year, the provincial government having granted on \$3,000,000 reduction in the assessment of city land. At the new rate Edmonton will contribute \$73,000 to the social service fund.

Condensed milk production was up

In 1939, the figures for the first nine months being \$8,379 cases against the previous 40,604. Value of this production was \$223,022 against the previous \$108,799. Wholesale trade to Preston, Barbara Tamiroff. This is a thrilling drama of pioneer railroading.

PREMIER HEPBURN says:

### "ONTARIO STANDS READY"

"Ontario is responsible for one-half the industrial output of the Dominion, and forty-four per cent of the entire production from all sources. Translated into money, this means over Two and One-Quarter Billion Dollars annually."

"By unanimous resolution of the Legislature, Ontario indicated her immediate readiness to mobilize these immense resources on behalf of Great Britain and France, the two great democracies from which most of our people have sprung."

"The issues in the present conflict have been so clearly drawn that our freedom-loving citizens were never more unitedly resolved to accept the challenge. With men, materials, and resources, Ontario stands ready."

(Signed) M. F. HEPBURN, Prime Minister.

ONTARIO has four hundred and twelve thousand square miles with the largest population in the Dominion, as well as great diversity in activities. She has mines, farms, forests, industries, woods, lakes and mighty rivers. Ontario has lived up to her opportunities, expanded her markets to all parts of Canada and the Empire—buying from all parts of Canada—selling to all parts.

Remember, when you buy a Canadian-Built car, you are helping support an industry

that distributes more than \$22,000,000,000 annually in wages and salaries to many thousands of families dependent on the industry itself. Add to these the families that are supported by industries supplying raw and finished materials to the Automobile manufacturers, and you get an idea of what the activity means to the Canadian House of Commons.

A busy Automotive Industry in war time is a live asset indeed—a truly national war enterprise.

### UNITY IS VITAL IN WINNING THE WAR

Our Soldiers, Sailors, Airmen—our citizens—our people—our people who are enlisted "During the Duration" to assist in every way the Empire in her struggle—all of these find their real strength and spirit de corps in the Unity of the Dominion that stands behind them.

AUTOMOTIVE INDUSTRIES OF CANADA

1006 LUMSDEN BUILDING—TORONTO, ONTARIO.

Ask us for Facts and Figures concerning the Automotive Industries and the work they are doing in Canada, and we will send them.

## NOTICE OF ANNUAL MEETING

Public notice is hereby given that a meeting of the electors of the Town of Gleichen will be held in the Community Hall, Gleichen, on Friday, the 26th day of January, 1940, at 8:00 o'clock p.m., for the purpose of receiving the report of the Mayor, Secretary-Treasurer, Auditor, and chairmen of the various committees of the Council for the year ending December 31, 1939.

Dated at Gleichen this 17th day of January, 1940.

The annual meeting of the Gleichen S.D. No. 103 will be held immediately at the close of the Town Meeting.

W. J. PHYTHIAN,  
Secretary-Treasurer.
